

Rayyan Panja

Senior Full-Stack Developer

rayyan.panja.work@gmail.com · +91 9601786974 · Ahmedabad, India · github.com/rayyanpanja-123

PROFILE

Senior full-stack engineer with 3+ years shipping production-grade Laravel + Vue 3 systems at scale. Specializes in multi-tenant SaaS architecture, RBAC design, and complex API integrations. Has designed backends spanning 20-module healthcare platforms, AI-powered training tools, and constraint-programming seating solvers. Leverages AI coding agents (Claude Code, Cursor, Windsurf) to accelerate architecture exploration and scaffold complex systems faster — and builds tooling for them, having shipped Pigi, a SaaS platform for managing AI agent configurations across engineering teams. Writes code that is maintainable by the next engineer, not just functional for the current sprint.

EXPERIENCE

Senior Full-Stack Developer

Jul 2023 – Present

CodersHut · Ahmedabad, India

- Designed and owned multi-tenant Laravel SaaS backend architecture — implemented per-org database isolation, scoped middleware, and role-based access control across 8+ modules, eliminating cross-tenant data leakage risks
- Optimized critical PostgreSQL and MySQL queries via composite indexing and query restructuring, reducing API response times by ~40% on high-traffic analytics dashboards
- Led migration of legacy Blade interfaces to Vue 3 + Inertia.js with Composition API, introducing reusable component architecture that cut new-feature UI development time significantly
- Mentored 3 junior developers through structured code reviews, pairing sessions, and architecture walkthroughs — two were promoted within a year
- Enforced code quality via test coverage thresholds, PR review checklists, and standardized exception handling patterns across the team

KEY PROJECTS

Pigi · *Laravel 12 · Vue 3 · Inertia.js · TypeScript · Claude API · Stripe · stancl/tenancy · Node.js CLI*

- Built a multi-tenant SaaS dashboard for dev teams to manage AI tool configurations — Claude agents, MCP servers, skills, and CLAUDE.md documents — synced to local projects via a published npm CLI (@cgdevs/pigi)
- Engineered a hash-based change detection pipeline assembling tool-specific configs from centralized definitions; only diffs are pushed, keeping sync fast across large teams
- Implemented full Stripe billing lifecycle (webhook-driven subscription sync, per-plan API limits via EnforcePlanLimits middleware) and async AI generation queue with job-status polling
- Published companion CLI (Node.js, npm) with init, sync, status, and git post-merge hook support — authenticates against the dashboard API and writes tool config files to disk
- Visit: <https://pigi.dev/>

FCN Seating · *Laravel 10 · Vue 3 · Inertia.js · Python · Google OR-Tools (cp_model) · Symfony\Process*

- Built a VIP lounge seating planner for FC Nürnberg matchdays — admins assign corporate guests with booked seat credits across multiple physical lounges and tables
- Engineered a constraint programming seating solver in Python (Google OR-Tools cp_model) invoked via Laravel queue jobs; models seat assignment as a CSP, diagnoses infeasibility (capacity, lounge-aware table uniqueness, invalid fixed-table conflicts), and posts the solution back via API

- Implemented three solver variants (standard, direct, advanced), a credit ledger with per-company transaction logs, and a CSV export pipeline for post-solve output
-

Fruchthof · *Laravel 11 · Vue 3 · Inertia.js · FCM · LexOffice API · DomPDF · maatwebsite/excel · Google Maps*

- Built a B2B wholesale produce ordering platform — buyers browse categorised products with multi-unit/packaging pricing, place orders, and receive PDF invoices; warehouse admins manage suppliers, delivery schedules, and daily reports
- Integrated LexOffice (German accounting API) for two-way contact and invoice sync, FCM push notifications for mobile order updates, and Google Maps for delivery routing
- Delivered dual interfaces: a full Inertia.js web admin and a separate Sanctum-authenticated REST API (/api/v1) serving a mobile client with OTP auth, cart, wishlist, and order tracking

PCT (*Letztalk*) · *Laravel 11 · Vue 3 · Inertia.js · OpenAI Assistants API · FFmpeg · Laravel Passport*

- Built an AI-powered corporate training platform — trainers author versioned scenarios with configurable system instructions, files, and speech settings; students interact with an OpenAI assistant playing the scenario role in real time
- Implemented versioned prompt management (instructions stored per version slug) so trainers can update live scenarios without breaking existing student threads
- Built an audio pipeline where student recordings are merged via FFmpeg into a per-session full audio file; trainer view supports full chat replay with correction annotations and grading

TECHNICAL SKILLS

Backend	Laravel 10–12 · PHP · Node.js · Express.js · REST API Design · RBAC · Multi-tenancy
Frontend	Vue 3 · Inertia.js · Composition API · TypeScript · Tailwind CSS
Databases	MySQL · PostgreSQL · SQLite · Query Optimization · Indexing
AI Agents	Claude Code · Cursor · Windsurf · MCP ecosystem · Prompt engineering
AI / APIs	Anthropic Claude API · OpenAI Assistants API · MCP Protocol · LexOffice · Stripe · FCM · AWS S3

EDUCATION

Diploma in Computer Engineering

Noble Institute of Technology · Junagadh, Gujarat, India

Aug 2020 – Jul 2023
